

BAGASSE (SUGARCANE) VS PAPER

Paper has long been a staple in the hospitality industry. From plates and bowls to cups and napkins, paper has been the go-to base element.

Bagasse – the eco-friendly cousin of paper – they look alike, have similar textures, and are used in similar products. Indeed, Bagasse and paper have similar characteristics in terms of usage and malleability and both are very resilient.

The main difference is in the material. Bagasse is an eco-friendlier option, Bagasse looks and feels like wood paper, but bagasse only takes 1 year to grow and will compost in less than 60 days where

Bagasse
